

# Northern Michigan University (Marquette Co, MI)

CS202-02-25F: Python (Andrew A. Poe)  
Quiz 4

Name: \_\_\_\_\_  
Friday 26 September 2025 2:00 P.M. EDT

Time: 15 minutes.

Write a Python method (NOT a whole program):

```
def BigLittle (n) : # prints out the largest and smallest  
                    # elements in list n
```

For example, if the list were [4,9,8,5,5], the function would print 9 and 4.

```
def BigLittle (n) :  
  
    l = n[0]  
    s = n[0]  
    for i in n :  
        if i > l :  
            l = i  
        elif i < s:  
            s = i  
    print ("Largest: "+str(l))  
    print ("Smallest: "+str(s))
```
