CS202-02-25F: Python (Andrew A. Poe)
Quiz 7

Name: _____
Friday 31 October 2025 2:00 P.M. EDT

Time: 15 minutes.

Write Python code that draws a triangle on the screen using turtle graphics. The easiest triangle is probably an equilateral triangle, in which all angles are 60 degrees. However, you don't have to do that. You can draw any triangle, as long as one of the three sides is 100 units long (approximately).
