

Northern Michigan University (Marquette Co, MI)

CS 344-01-24F: iOS / iPhone Programming

Program 4

Due: Friday 25 October 2024 1:00 P.M. EDT

Database

Write an app for the iPhone Simulator that does the following:

It creates a mock information page for sports teams. The teams should be organized by sport (baseball, football, basketball, etc.). When you select a team, an information page should pop up giving vital statistics about that team, including full name, sport, city, and record. You should also allow new teams to be added and existing records to be removed. Changes that the user makes to the database should be “remembered” upon subsequent executions of the app.

ALL of this information should be stored in an SQL database collection.
