You have a button called myButt that needs to be linked to a button widget in the layout called butt1. When this button is clicked, 8 seconds of a certain song needs to be played. This song can be found online at http://www.rickrolled.com/nevergonna.mp3 .

Write the Kotlin code needed to accomplish this.

```
myButt = findViewById (R.id.butt1)
myButt.setOnClickListener {
 val mp = MediaPlayer()
 mp.setDataSource
("http://www.rickrolled.com/nevergonna.mp3")
 mp.prepare()
 mp.start()
 try {
  TimeUnit.SECONDS.sleep (8)
 } catch (e:Exception) {
 }
 mp.pause ()
}
```
