Practice Quiz 8  
Thursday 3 April 2024 4:00 P.M. EDT  
Time: 15 minutes

An SQLite database named "startrek.db" contains a table called "STARTREK". STARTREK contains a field called "CAPTAIN", a field called "SHIP", and a field called "SHOW". Write Kotlin code that removes the records of all those Star Trek programs whose show title matches the ship name, and then adds a record for a new Star Trek show with Andy Poe as captain of the U.S.S. CoolDude. You do not have to write the code to open the database. You can assume it's already open and assigned to an SQLiteDatabase? variable named mStarTrek. You may also assume that the StarTrekTable class has been written appropriately for this database.

Practice Quiz 8

Thursday 3 April 2024 4:00 P.M. EDT

Time: 15 minutes

```
mStarTrek!!.delete  
    (StarTrekTable.NAME,"${ComicsTable.Cols.SHOW} =  
    ${ComicsTable.Cols.SHIP",null)  
val values = ContentValues ()  
values.put(StarTrekTable.Cols.CAPTAIN,"Andy Poe")  
values.put(StarTrekTable.Cols.SHIP,"U.S.S. CoolDude")  
values.put(StarTrekTable.Cols.SHOW,"Captain Cool")  
mStarTrek!!.insert (StarTrekTable.NAME,null,values)
```
